## PROJECTS

- E-commerce Analytics Dashboard (2024):** Designed and implemented a dashboard using Tableau to analyze sales and customer behavior for an online retail store.
- Billing software** Building billing software in Python involves creating a user-friendly interface, managing data effectively, and ensuring secure payment processing. By leveraging Python's extensive libraries and frameworks, you can create a robust solution tailored to the needs of businesses.
- FLIPKART, AMAZON** clone Building a clone of e-commerce platforms like Amazon or Flipkart using HTML, CSS, and JavaScript is a great way to practice web development skills. While you may not replicate all functionalities of these complex platforms, focusing on core features such as product listings, a shopping cart, and user authentication will provide a solid foundation. This project can also serve as a portfolio piece to showcase your skills in front-end development.
